

Contents

Preface	xv
What the Book Describes	xv
Boulder's Geological Context	xvi
Organization of the Book	xviii
What the Book Does Not Describe	xix
Names of Rock Units Used in This Book	xx
Acknowledgements	xxi
Chapter 1: A Guidebook in the Sky —	
the Boulder Backdrop	1
The Western Landscape	1
Zooming in on Boulder	2
The Landforms Reflect the Geology	3
A Tale Told by the Missing	5
The Mountain Core	6
Chapter 2: Continental Collisions, Channel Sands, Dunes,	
and Rock Cycles — a Ten-Minute Geology Course	9
A Science of Change	9
Geologic Time	10
Plate Tectonic Processes	14
Rock Cycles	15
Rock Types	18
Basic Principles	19
Faults and Unconformities	20
The Stratigraphic Column around Boulder	22
A Note on Named Stratigraphic Units	24
Depositional Patterns	25
Climatic, Geographic, and Sea-Level Changes	27
Mountain Ranges and Basins	27
Other Earth Movements	28
Landslides, Earthflows, and Slumps	28
Chapter 3: The Onion from Inside — Short Geological	
History of the Boulder Area	31
Precambrian Boulder	32
The Great Unconformity	34
The Pennsylvanian	34
The Permian	35
The Triassic	36
The Jurassic	36

Geology of Boulder County

The Cretaceous	36
The Rise of the Modern Rocky Mountains	37
The Tertiary and Quaternary Periods	38
Boulder's Position along the Front Range	39
Boulder's Red Rocks	40
Chapter 4: Into the Mountains and Back in Time — the Precambrian Rocks	43
How Do Geologists Know About These Rocks?	44
In the Lab	44
Archean Wyoming and the North American Craton	45
Chronology	47
Precambrian Tectonic History	48
Boulder's Precambrian Rocks	49
1.7 Billion-Year and Older Rocks	50
1.4 Billion-Year-Old Rocks	52
Chapter 5: The 1½-Billion-Year Gap — the Great Unconformity	55
What Geologists Know About Colorado During This Time	56
Proterozoic	57
Early Paleozoic	57
Cambrian Period (542-488 Ma)	58
Ordovician Period (488-444 Ma)	59
Silurian Period (444-416 Ma)	60
Devonian Period (416-359 Ma)	60
Mississippian Period (359-318 Ma)	61
Boulder from the Later Proterozoic to the Pennsylvanian	61
Chapter 6: The Crest of the Wave — the Flatirons	63
Characteristics of the Fountain Formation	63
North America in the Pennsylvanian (318-299 Ma)	66
Colorado in the Pennsylvanian	67
The Ancestral Rockies	69
Axes of the Ancestral and Modern Front Ranges	70
The Pennsylvanian Context	72
The Pennsylvanian Big Picture	73
Final Notes on Boulder County in Pennsylvanian Time	73
Why Are the Flatirons So Steep, and Why Do They Provide Such Good Climbing?	74
Chapter 7: University Buildings and Ancient Windstorms — the Lyons Formation	77
The Permian Period (299-251 Ma)	77

The Triassic Period (251-200 Ma)	78
The Permian in Boulder County	79
The Fountain and Ingleside Formations	81
The Lyons Formation	81
The Lykins Formation	84
The Triassic in Boulder County	85
The Jelm Formation	85
Chapter 8: Jurassic Park	87
The Jurassic Context	88
The Sundance Formation	89
The Morrison Formation	89
Chapter 9: Undersea Boulder — the Cretaceous Period	91
An Overview of the Cretaceous in the Western Interior of North America	92
The Western Interior Seaway	92
Mountain Building Events	94
The Cretaceous in Boulder County	96
The Dakota Hogback —	
Boulder Becomes Beachfront Property	99
The Dakota Group in Boulder County	101
The Lower Dakota Group —	
Lytle Formation and Plainview Sandstone	102
The Middle Dakota Group — Skull Creek Shale	104
The Upper Dakota Group — Muddy Sandstone	106
Floors of the Boulder Sea — Cretaceous Marine Deposits	107
The Benton Group (Benton Shale, Benton Formation)	107
The Niobrara Formation	108
The Pierre Shale	109
Late Cretaceous Boulder Beaches — Fox Hills and Laramie Forma- tions	114
The Fox Hills Formation	116
The Laramie Formation	119
Late Cretaceous Growth Faults	121
Chapter 10: The Rise and Exhumation of the Front Range	125
The Rise of the Modern Front Range	125
Plate Tectonics and the Modern Front Range	127
Other Tectonic Models for the Laramide Orogeny	129
Tectonic ‘Style’ of the Front Range Uplift	130
The Exhumation of the Front Range	130
The ‘Late Eocene Erosion Surface’	131
A Cenozoic Chronology of the Front Range	135

Geology of Boulder County

Laramide Fault Systems	137
North-Northwest Faults along the Mountain Front	138
Cenozoic Intrusions	141
The Colorado Mineral Belt	143
Chapter 11: The Quaternary — Glaciation, Alluvial	
Deposits, Stream Cutting, and Terraces	145
Glaciation above Boulder	145
How Glaciers Sculpt the Mountains	146
Glacial Features	147
Glacial Stages	148
Alluvial Deposits	149
Deposits in Boulder County	150
River Terraces	151
Canyon Incision Rates and Weathering of Slopes	152
Chapter 12 — Field Trips	155
Introduction	155
Maps	156
GPS Positions	156
Equipment for Field Observations	157
Tables	157
Access	157
Formations/Rock Units by Field Trip & Waypoint	158
1. Chasm Lake	160
2. Hall Ranch	175
3. Highway 36 North of Boulder to Lyons, and South St. Vrain Canyon	180
4. Allenspark Area	190
5. Hygiene and Rabbit Mountain	193
6. Heil Ranch 1	198
7. Heil Ranch 2	206
8. Six-mile Fold	215
9. Dakota Ridge	219
10. Lake Isabelle	230
11. Rainbow Lakes	239
12. Lee Hill and Olde Stage Roads	246
13. Gold Hill	256
14. Valmont Butte (Valmont Dike) and White Rocks	262
15. Winiger Ridge	268
16. Settlers Park	274
17. Boulder Canyon	283

18. Flagstaff	287
19. Skunk Canyon and Woods Quarry	296
20. NCAR	301
21. Bear Canyon	306
22. Shadow Canyon	314
23. Marshall Mesa	321
24. Doudy Draw	329
25. Coal Creek Canyon	343
Appendices	353
A: Further Reading and Resources	355
General Geology Texts and Literature	355
Colorado Geology	356
Plate Tectonics	357
Evolution of Life	357
Technical Literature	358
Web Resources	358
B: Basic Geology	361
Geologic Time Periods	361
The Geologic Time Scale	362
Index Fossils	370
Radiometric Dating and Its Relation to Other Dating Methods	371
Paleomagnetic Dating	377
Classification and Evolution of Rocks	378
Folds, Faults, and Unconformities	388
Plate Tectonics	392
C: Using Topographic Maps	409
USGS 7½-Minute Series	411
Learning to Read Topographic Maps	412
D: Using Geological Maps	413
Rock Units	413
Abbreviations for Rock Units	414
Stratigraphic Cross-Sections	415
Other Symbols and Features	415
Reading Geological Maps	415
E: Topographic & Geological Maps of Boulder County	417
F: GPS Positions of Field Sites	421
A Few GPS Nuances	421
Receiver Settings	422
Table Format	423
Glossary	425
Literature Cited	434
Index	453

Figures

Figure 1-1 — Generalized geological cross-sectional diagram of Boulder.	4
Figure 2-1 — Geologic time scale	12
Figure 2-2 — Internal structure of the earth.	14
Figure 2-3 — An example of cross-cutting relationships.	21
Figure 2-4 — Boulder generalized stratigraphic column.	22
Figure 2-5 — Sedimentary rocks bear the evidence of their origins. Cross-bedding in sandstone of the Lykins Formation.	26
Figure 3-1 — A salad chef's view of Boulder geology	31
Figure 3-2 — An outcrop of the Fountain Formation showing alternating maroon coloring and whitened layers.	41
Figure 4-1 — Precambrian core rocks above Boulder.	42
Figure 4-2 — The Wyoming and Colorado Provinces.	46
Figure 4-3 — Schematic tectonic view of Boulder 1.9-1.7 Ga. Subducting plate melted in asthenosphere to form plutons.	48
Figure 4-4 — Silver Plume Granite — the east face of Longs Peak. Banded rock on the lower left is biotite schist/gneiss.	53
Figure 6-1 — The Flatirons, from a point east of Gregory Canyon. ..	62
Figure 6-2a — Channel structures in the Fountain Formation.	64
Figure 6-2b — Example of a prominent channel cut into sandstone and filled with conglomerate.	65
Figure 6-3 — The Ancestral Rockies	68
Figure 6-4 — The modern and Ancestral Front Ranges.	71
Figure 7-1 — Facies changes along the Ancestral Front Range at the time of deposition of the upper Fountain	80
Figure 7-2 — Facies changes along the Ancestral Front Range at the time of deposition of the Lyons Formation	82
Figure 7-3 — Diagram of sand dune deposition.	84
Figure 9-1 — Cretaceous Interior Seaway of North America near its maximum extent in the Late Cretaceous.	95
Figure 9-2 — Dakota Hogback north of Twomile Canyon	100
Figure 9-3 — Cretaceous Seaway at the time of the deposition of the middle and upper Dakota Group.	105
Figure 9-4 — Cretaceous Seaway shoreline at the time of the deposition of the Pierre Shale.	110
Figure 9-5 — Vertical cross-sections of a typical delta-front	115
Figure 9-6 — Paleogeography of the Western Interior during deposition of Fox Hills Sandstone.	117
Figure 9-7 — A schematic view of intertonguing of Late Cretaceous formations.	119
Figure 9-8 — Schematic view of Cretaceous faults near Marshall. ...	121

Geology of Boulder County

Figure 9-9 — Schematic views of listric normal and growth faults ..	122
Figure 10-Front – The Rocky Mountain erosion surface as seen from the overlook on the Boulder-Denver Turnpike	124
Figure 10-1 — Andean-type mountain ranges result from subduction of an oceanic plate under the continental crust of another plate. ...	127
Figure 10-2 — Hypothetical mechanism for the Farallon plate to have caused the Laramide orogeny.	129
Figure 10-3 — Three tectonic ‘styles’ of uplift in the Rocky Mountains.	131
Figure 10-4 — Schematic cross-section of the Hoosier Fault	139
Figure 10-5 — Schematic cross-section of the Boulder Fault	141
Figure 11-1 — Moraine that was breached by a Pleistocene lake	149
Figure 11-2 — River terraces.	153
Figure 12-1 — Locator map for field trips.	154
Figure FT1-Schist — Example of biotite schist	160
Figure FT1-WP7a —The first outcrop of metamorphic bedrock along the Chasm Lake Trail.	164
Figure FT1-WP7b —Detail of Silver Plume Granite with microcline (potassium feldspar) phenocrysts.	165
Figure FT1-WP8 —Mt. Meeker and Longs Peak	166
Figure FT1-WP9 —East face of Longs Peak.	167
Figure FT1-WP10 —Biotite schist intruded by granite.	168
Figure FT1-WP12a —Chasm Lake Trail crosses steep snow.	169
Figure FT1-WP11 — Peacock Pool	169
Figure FT1-WP13a — Last bench below Chasm Lake.	171
Figure FT1-WP12b — Outcrop of a Tertiary intrusion.	171
Figure FT1-WP13b — Bench below Chasm Lake.	172
Figure FT1-WP14 — East face of Longs Peak from Chasm Lake. ..	173
Figure FT2-WP1 — Detail of Fountain Formation	176
Figure FT2-WP2 —Quarry in a sill of Paleocene age.	177
Figure FT2-WP3 — Weathered Silver Plume Granite	178
Figure FT3-WP3 — <i>Inoceramus sp.</i> clams in Fort Hays Limestone. .	183
Figure FT6-WP1 — Dacite igneous sill.	200
Figure FT6-WP7a — Base of lower Dakota Group at Heil Ranch. ..	202
Figure FT6-WP7b — Large piece of the Lytle Formation becoming detached from the cliff.	203
Figure FT7-WP4 — Road cut in alluvium/colluvium	208
Figure FT7-WP9 — Forelle Limestone stromatolites.	209
Figure FT7-WP10 — Dakota Hogback, Fountain/Lyons Hogback, and Morrison-Lykins valley.	210
Figure FT7-WP14 — Looking north from Heil Ranch at Fountain, Ingleside, and Lyons Formations near Lyons.	213
Figure FT8-WP1 — Fort Hays Limestone along U.S. 36	217
Figure FT9-WP14 — Looking south from the Hogback Trail.	225

Figure FT9-WP15-1 — Lower Dakota along the Hogback Trail. 226
 Figure FT9-WP15-2 — Cross-lamination in lower Dakota Group. . 227
 Figure FT9-WP17 — Haystack Mountain and Table Mountain. 228

Figure FT10-WP2 — Looking west down Long Lake. 234
 Figure FT10-WP4 — Tertiary monzonite cliffs. 235
 Figure FT10-WP5 — Outcrop of diorite below Lake Isabelle. 236
 Figure FT10-WP6a — Monzogabbro outcrop. 237
 Figure FT10-WP6b — Peaks and cirques above Lake Isabelle. 238
 Figure FT11-WP10a — Terminal moraine. 243
 Figure FT11-WP10b — Small cirque above Rainbow Lakes 244
 Figure FT12-WP2 — Lykins Formation along Lee Hill Road. 247
 Figure FT12-WP3 — Canyon Springs Sandstone 248
 Figure FT12-WP4 — Lytle Formation along Lee Hill Road. 249
 Figure FT12-WP5 — Upper Dakota Group along Lee Hill Road. .. 250
 Figure FT12-WP7 — Detail of Forelle Limestone (dolomite). 252
 Figure FT12-WP10 — Lyons Formation along Olde Stage Road. ... 253
 Figure FT14-WP1 — West face of Valmont Butte (Dike). 264
 Figure FT15-WP3 — Potholes in Boulder Creek Granodiorite. 270
 Figure FT15-WP7 — Miocene fluvial deposit on Winiger Ridge. 272
 Figure FT15-WP8 — Rocky Mountain erosion surface 273
 Figure FT16-WP3 — Flagstaff Mountain with Fountain Formation
 spire in the foreground. 277
 Figure FT16-WP5 — Detail of the Fountain Formation. 278
 Figure FT16-WP7 — Dakota Ridge, Lykins, and Morrison reappear as
 Boulder Fault swings west. 279
 Figure FT16-WP8 — Fountain Formation tipped to vertical. 280
 Figure FT17-WP6 — Boulder Creek Granodiorite along bike path. 285
 Figure FT18-WP3 — Lyons Formation cliff. 289
 Figure FT18-WP9 — Weathered Granodiorite at Contact Corner. .. 293
 Figure FT19-WP12 — Lyons Sandstone at Woods Quarry. 299
 Figure FT21-WP9 — Bear Canyon from the Mesa Trail. 311
 Figure FT22-WP2 — The Matron from the Mesa Trail. 317
 Figure FT23-WP2 — Laramie Formation at Marshall Mesa. 324
 Figure FT23-WP8 — Fox Hills Formation across from
 Marshall Mesa. 327
 Figure FT24-WP3 — Hygiene Sandstone along Community Ditch. 332
 Figure FT24-WP8 — Flatirons and hogbacks showing displacement
 along Hoosier Fault. 334
 Figure FT24-WP11-1 — Clay quarry in middle Dakota Group. 335
 Figure FT24-WP11-2 — Ripple marks in middle Dakota Group. ... 336
 Figure FT24-WP13-1 — Lower to middle Dakota Group sandstone
 where the road has been blasted through. 337
 Figure FT24-WP13-2 — Contact between Plainview Sandstone and

Geology of Boulder County

Bear Creek member of Dakota.	338
Figure FT24-WP13-3 — The contact between Lytle Formation and Plainview Sandstone of Dakota Group.	339
Figure FT24-WP14 — Contact between Lytle Formation and Morrison Formation.	340
Figure FT25-WP5 — Schist outcrop.	348
Figure FT25-WP6 — Quartzite outcrop.	349
Figure B-1 — Geologic time scale.	362
Figure B-2 — Elements — hydrogen and carbon.	372
Figure B-3 — Molecule of water.	373
Figure B-4 — Isotope — Heavy water molecule.	374
Figure B-5 — Metamorphosis from heating. Los Cuernos in Torres del Paine, Chile.	381
Figure B-6 — The rock cycle.	383
Figure B-7 — Two examples of large-scale sedimentary structures. .	385
Figure B-8 — Some small-scale sedimentary structures.	385
Figure B-9 — An anticline, a syncline , and a monocline.	388
Figure B-10 — Plunging fold at Six-Mile Fold.	389
Figure B-11 — Types of unconformities.	390
Figure B-12 — Faults.	391
Figure B-13 — Overall structure of Front Range faulting.	393
Figure B-14 — Wegener’s continental fitting.	394
Figure B-15 — Basic structure of the earth.	395
Figure B-16 — The major modern plates.	397
Figure B-17 — The major mid-ocean ridges.	398
Figure B-18 — Nazca Plate has new material added at the East Pacific Rise, and subducts under South America.	400
Figure B-19 — Continental shelter house on a plate raft.	403
Figure B-20 — A mid-ocean ridge,.	406
Figure C-1 —Example of topographic features and contour map	410
Figure D-1 — Stratigraphic cross-sections.	415
